Combustion and Flame

THE JOURNAL OF THE COMBUSTION INSTITUTE

The journal exists for the publication of experimental and theoretical investigations of combustion phenomena and closely allied matters. Among the subjects emphasized are: atmospheric pollution from combustion; combustion in practical systems; deflagration and detonation waves; electrical aspects of flames; experimental techniques; fire phenomena; flame ignition; inhibition, propagation, stability and structure; fluid dynamics and combustion; heat transfer and radiation; heterogenous combustion; kinetics and mechanisms of combustion reactions; limits of flammability and of spontaneous ignition; modeling and scaling in combustion processes; new applications of combustion; propellants; sooting; spectra; supersonic reacting flow; thermal decomposition processes; thermochemistry and thermodynamics; transient species; transport properties and turbulence in flames. The Editors also encourage the submission of critical reviews of recent research. Announcements and reports of Combustion Institute and other pertinent meetings will be published whenever possible, as will reviews of relevant books.

EDITORS

J. N. Bradley
Department of Chemistry
University of Essex
Colchester CO4 35Q, England

H. B. Palmer
Fuel Science Section
Department of Materials Science and Engineering
319 Steidle Building
University Park, Pennsylvania 16802

DEPUTY EDITORS

R. F. Simmons
Department of Chemistry
The University of Manchester
Institute of Science and Technology
P.O. Box 88, Sackville Street
Manchester M60 1 QD, England

R. A. Strehlow
Department of Aeronautical
and Astronautical Engineering
101 Transportation Building
Urbana, Illinois 61801

F. A. Williams
Department of Applied Mechanics
and Engineering Sciences
University of California, San Diego
P.O. Box 109
La Jolla, California 92037

EDITORIAL BOARD

Term ending 1980
P. G. Ashmore
P. J. Van Tiggelen
H. Gg. Wagner

Term ending 1982
R. Delbourgo
M. F. R. Mulcahy
J. de Ris

Term ending 1984

COMBUSTION AND FLAME

THE JOURNAL OF THE COMBUSTION INSTITUTE

VOLUME 40 1981

Contents

ALOK NATH DAS (Dhanbad, India)
Degradation Mechanism Under Isothermal Conditions of Cross-linked Polymer by I. R. Spectroscopy 1
GARY S. SAMULESEN (Irvine, CA), JAMES D. TROLINGER (Costa Mesa, CA), MICHAEL P. HEAP, and Wm. RANDALL SEEKER (Santa Ana, CA)
Observation of the Behavior of Coal Particles During Thermal Decomposition 7
L.-D. CHEN and G. M. FAETH (University Park, PA)
Initiation and Properties of Decomposition Waves in Liquid Ethylene Oxide 13
S. G. KULKARNI and S. P. PANDA (Poona, India)
Synthesis, Characterization and Hypergolicity of Aliphatic Furfurylidene Ketones with Red Fuming Nitric Acid as Oxidizer 29
B. F. GRAY and J. C. JONES (North Ryde, Australia)
Critical Behavior in Chemically Reacting Systems IV—Layered Media in the Semenov Approximation 37
D. BRADLEY and M. L. GUPTA (University of Leeds, England)
Direct and Alternating Current Coronas in Flame Gases 47
D. STEPOWSKI and M. J. COTTEREAU (Mont-Saint Aignan, France)
Study of the Collisional Lifetime of Hydroxyl ($^2\Sigma^+$, $v' = 0$) Radicals in Flames by Time-Resolved Laser-Induced Fluorescence 65
S. R. JAIN, K. C. ADIGA, and V. R. PAI VERNEKER (Bangalore, India)
A New Approach to Thermochemical Calculations of Condensed Fuel-Oxidizer Mixtures 71
CHARLES K. WESTBROOK (Livermore, CA), ANDREW A. ADAMCZYK, and GEORGE A. LAVOIE (Dearborn, MI)
A Numerical Study of Laminar Flame Wall Quenching 81

Brief Communications

B. S. HAYNES, H. JANDER, H. MATZING, and H. GG. WAGNER (Gottingen, West Germany)
The Influence of Various Metals on Carbon Formation in Premixed Flames 101
F. DAUBLIN (St. Louis, France)
Investigations of Some Selected Explosives with Electron Impact 105

Book Review 109

Editorial Announcement. 111

S. R. JAIN, K. C. ADIGA, and V. R. PAI VERNEKER (Bangalore, India)
Thermochemistry and Lower Combustion Limit of Ammonium Perchlorate in Presence of Methylammonium Perchlorates. 113

TOSHIMI TAKAGI, HYUN-DONG SHIN, and AKIRA ISHIO (Osaka, Japan)
Properties of Turbulence in Turbulent Diffusion Flames 121

B. DESHAIES and J. C. LEYER (Poitiers, France)
Flow Field Induced by Unconfined Spherical Accelerating Flames 141

M. W. SLACK and A. R. GRILLO (Bethpage, NY)
Shock Tube Investigation of Methane-Oxygen Ignition Sensitized by NO_2 155

S. L. ALY and C. E. HERMANCE (Ontario, Canada)
A Two-Dimensional Theory of Laminar Flame Quenching. 173

OWEN I. SMITH (Los Angeles, CA)
Probe-Induced Distortions in the Sampling of One-Dimensional Flames. 187

MICHAEL C. DRAKE and JOHN W. HASTIE (Washington, DC)
Temperature Profiles of Inhibited Flames Using Raman Spectroscopy 201

W. C. GARDINER, Jr., Y. HIDAKA, and T. TANZAWA (Austin, TX)
Refractivity of Combustion Gases. 213

Brief Communication

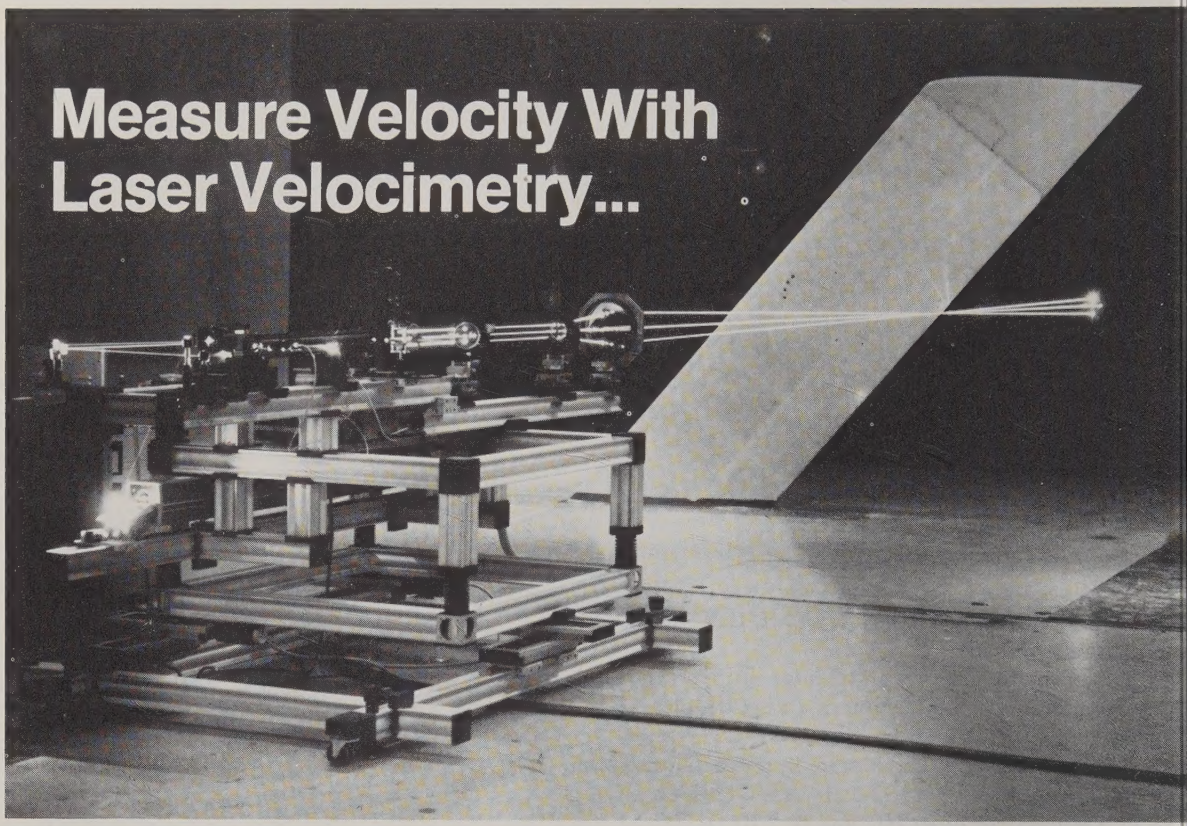
G. McKAY and J. A. AGA (Belfast, Northern Ireland)
Product Formation in the Slow Oxidation of Isobutane 221

YA. B. ZELDOVICH (Moscow, USSR)
Structure and Stability of Steady Laminar Flame at Moderately Large Reynolds Numbers 225
G. JOULIN and T. MITANI (La Jolla, CA)
Linear Stability Analysis of Two-Reactant Flames 235
K. NAKANISHI, T. KADOTA, and H. HIROYASU (Hiroshima, Japan)
Effect of Air Velcoity and Temperature on the Soot Formation by Combustion of a Fuel Droplet 247
L. W. COLLINS (Miamisburg, OH)
Role of Potassium Perchlorate in the Desensitization of Titanium Powder to Electrostatic Ignition 263
J. C. TRICOT, A. PERCHE, and M. LUCQUIN (Villeneuve d'Ascq, France)
Gas Phase Oxidation of Nitromethane 269
DIETER NÖTZOLD and JOHANNES ALGERMISSEN (Stuttgart, West Germany)
Chemical Kinetics of the Ethane–Oxygen Reaction Part I: High Temperature Oxidation at Ignition Temperatures Between 1400°K and 1800°K 293
DIETER NÖTZOLD and JOHANNES ALGERMISSEN (Stuttgart, West Germany)
Chemical Kinetics of the Ethane–Oxygen Reaction Part II: Pyrolysis and Oxidation at Temperatures Around 900°K 315

Brief Communications

B. F. GRAY and J. C. JONES (North Ryde, Australia)
Critical Conditions in Chemically Reacting Systems 331
Y. LEVY and F. C. LOCKWOOD (London, England)
Velocity Measurements in a Particle Laden Turbulent Free Jet 333
M. HIRANO, K. ODA, T. HIRANO, and K. AKITA (Tokyo, Japan)
Burning Velocities of Methanol-Air-Water Gaseous Mixtures 341

Measure Velocity With Laser Velocimetry...



NASA Photo

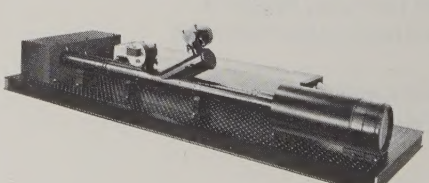
. . . A Non-Invasiv Method Of Measuremen

Supose you need to measure velocity around an airfoil. You need extremely accurate measurements. You need to make your measurements without disturbing the flow. And you require a small measuring point. TSI's Laser Velocimetry Systems (LDV) can make these measurements with relative ease and flexibility. It is a proven technique.

Even the difficult application of long-range measurements, utilizing a 13½ foot focal length lens, provided by TSI, proved successful in NASA studies. The Laser Velocimeter shown above was used to study the flow field in the wake region behind the wing at the agency's Langley Research Center. It mapped a velocity profile that demonstrated the direction and magnitude of the air flow within the wake defect. Understanding flow patterns is essential to the design of new wing shapes in aerodynamic testing.

The virtues of LDV are many. The use of laser beams eliminates the need for calibration or inserting a probe in the flow. LDV senses only the velocity and is independent of temperature, density and composition changes in the fluid. This allows good measurements in transonic and supersonic flows . . . and high temperature environments in combustion research.

Applications of LDV are very diverse . . . from measuring the air flow between



blades of rotating machinery to impro aerodynamic design . . . to the study o flames for better understanding of co bustion and mixing.

Measure combustion chamber efficie so that engine performance may be in proved and emissions may be reduce Study complex flows in the blood circ lation system. Gain a basic understan ing of mixing mechanisms and energy transfer in fluid flow.

TSI has engineered an entire line of L systems . . . from the relatively simple optics setup to the most sophisticated system design. TSI's modular system concept allows the flexibility to tailor- make a system, and update an existin system to meet your specific applicati requirements. Our application engine ing staff is available to discuss your re quirements today.

"TSI Puts You First in Fluid Flow Measurements."
